
Vacancy: DevOps Engineer – Cape Town; Bellville

You will be responsible for establishing and maintaining the Continuous Integration (CI) and Continuous Deployment (CD) automation infrastructure. You will work with a cross functional team to deliver scalable automation solutions to enable rapid development, configuration management of the source code and supporting test, deployment and production sustaining activities.

PREFERED REQUIREMENTS:

Must have a valid SA ID

Client experience in business 2 + YEARS

Programming/Automation, 2+ YEARS e.g., Terraform; Ansible; Testing; Scripting (Python/Bash); Docker; Kubernetes; Jenkins; Git Principles.

Cloud AWS - multiple clients/projects using the latest technologies and best practices (recommended)

SQL and database experience 2+ years

Have developed and successfully deployed a variety of web-applications at various clients/projects. 2+ years

Job Types: Full-time, Permanent

RESPONSIBILITIES:

Communication and Collaboration

- Breaking down silos. Able to build connections and relieve bottlenecks, which is done by talking to people.
- Better understanding of the target infrastructure and be well prepared with the changes in the product required for the changes in the infrastructure
- Should be able to assess and streamline the goals of Dev and Ops teams towards the common goal to ensure a flawless customer experience.
- Talk to key stakeholders
- Find out what the goals are
- Identify areas of improvement
- Ensure stakeholders realize what you are going to do

Automation

- Scripting cloud infrastructure using configuration management
- Automating tasks and workflows to improve the efficiency of people and processes
- Build automated deployments for consistent software releases with zero downtime (through build process, packaging, testing and automatic deployment).
- Evaluates existing applications and platforms and provides recommendations for improving performance by conducting gap analysis, identifying feasible alternative solutions, and assisting in the scope of modifications.
- Enable DevOps by moving code from Dev/ Test to Staging and Production. Troubleshoot issues along the CI/CD pipeline

Monitoring

- Implementation of actionable monitoring solutions.
- Exposing blind spots in applications and infrastructure, and then figuring out how to monitor those services.
- Ensure service uptime and optimal performance
- Building highly observable systems
- Enable full end-to-end traceability to provide both operational insights and usage understanding.

Client interaction

- Presentable, neat, clean and tidy at all times and when required matching the client's dress code.
- Punctual for all meetings and engagements.
- Be a brand ambassador at all times, being friendly, greeting all, keeping eye contact, communicating and behaving in a respectful manner.
- Living core values at all times.

Teamwork

- Working closely within a team of developers at various client sites/ in the office.
- Communicating with team and peers on a regular basis solving problems together.
- Collaboration is practiced at all times.
- Solve problems efficiently and effectively and help others to solve problems.
- Generously share knowledge and not work in isolation.
- Care and show interest and show respect to all.
- Adhere to company rules with regards to internal processes, timekeeping and time management, documentation and collaboration.
